

This is the **Master State of the Empire Report**. This document synchronizes your Aura Profile, current architectural progress, and the roadmap for the **Penuel Empire Portal**.

1. THE VISION: THE HUB-AND-SPOKE SYSTEM

We are building a dual-engine portal that manages two distinct business personalities under one "Empire" umbrella:

- **Penuel Plaza:** The "Luxury Amboseli" Hotel (Gold/Luxury Aura).
 - **Penuel Stopover:** The "Multi-Service Hub" Retail/Auto (Blue/Efficiency Aura).
-

2. CURRENT PROGRESS (The Foundation)

✓ Completed: The Structural Core

- **The Master Switch (Aura Sync):** The BusinessContext.jsx and DashboardLayout.jsx are fully functional. The system can flip the entire visual language (Colors, Data, and Logic) between Plaza and Stopover instantly.
- **Customer Front-End (Public Layer):**
 - Home.jsx, About.jsx, and Catalogue.jsx are built.
 - **Audit Correction:** We have identified the need to move the Customer Dashboard from "Charcoal/Dark" to the "Old Money Light" aesthetic (Off-white/Refined Cream) to match the About page.
- **Authentication Vault:** Login.jsx is production-ready with role-based entry (Owner vs. Secretary).
- **Dashboard Infrastructure:** Sidebar and Header systems are synced with the Aura engine.

🏗️ In-Progress: The Management Dashboard (CEO & Top Secretary)

- **Operations Engine:** The OperationsFeed.jsx and DashboardHome.jsx are mapping real-time data from the branch JSON files.
 - **Inventory/Service Cards:** The ServiceCard.jsx system is intelligently rendering Rooms, Retail, and Auto services based on the active branch.
-

3. THE AUDIT: IDENTIFIED DEFICITS

Before we begin Milestone 2, we must address these structural gaps:

1. **Visual Inconsistency:** The Customer Home/Catalogue pages are "too dark." They need to be refactored to use the light-luxury palette.
2. **Placeholder Logic:** The "Staff Management" and "Financial Reports" (Aura Analytics) pages are currently empty routes.
3. **Data Persistence:** The "Aura Switch" resets on page refresh. We need localStorage

integration for the activeBranch.

4. **Action Logic:** The "Order Now" buttons are silent. They need to send "Signals" to the Secretary's operations feed.

4. FUTURE PATH: THE ROADMAP

Phase 1: Visual Refinement & CEO Command (Tomorrow's Goal)

- **Task 1:** Refactor Home.css and Catalogue.css to the "Light Luxury" theme.
- **Task 2:** Build the **Aura Analytics (CEO)** module. This will provide a high-level view of revenue, occupancy, and traffic across *both* businesses simultaneously.
- **Task 3:** Implement **Staff Management**. Creating the interface where the CEO can see Secretary activity and Staff logs.

Phase 2: The Secretary Engine

- **Task 4:** Build the "Active Requests" queue. When a customer clicks "Order" on the front end, it must appear on the Secretary's dashboard.
- **Task 5:** Inventory Tracking. A way for the Secretary to mark items as "Out of Stock" or Rooms as "Occupied."

Phase 3: Financials & M-Pesa Integration

- **Task 6:** Currency Engine. Implementing the KES/USD toggle for international guests.
- **Task 7:** M-Pesa Stk Push integration for the Stopover retail and Plaza bookings.

5. TOMORROW'S STARTING POINT

When we reconvene, we will start with:

1. **CSS Refactor:** Lighting up the Customer Dashboard.
2. **The CEO Hub:** Building the AuraAnalytics.jsx component to replace the placeholder in App.jsx.

Aura Profile: Saved. Master Builder Log: Updated.

Standing by for your command to initiate tomorrow's build, Lead Architect.
